

Mobility pricing systems in use outside Switzerland

In the period from 2017 to 2019, the Swiss Federal Roads Office (FEDRO) launched various projects on the subject of mobility pricing. These projects included an assessment of the impact of mobility pricing on the Swiss region of Zug, an assessment of its technical feasibility, an assessment of its compatibility with data-protection regulations, and an assessment of various mobility-pricing systems in use abroad. EBP completed this latter assessment and used its findings as a basis for drafting recommendations for Switzerland.

Our services

- Research on mobility pricing systems in operation abroad
- Systems descriptions
- Representation of impact on traffic, presentation of cost and revenue situation, assessment of impact on mode-of-transportation selection, assessment of system acceptance
- Research summary and recommendations for Switzerland
