

Mobility pricing – federal assignment

In the period from 2017 to 2019, the Swiss Federal Roads Office (FEDRO) launched various projects pertaining to mobility pricing. These projects included an assessment of the impact of mobility pricing on the Swiss region of Zug, an assessment of its technical feasibility, an assessment of its compatibility with data-protection regulations, and an assessment of various mobility-pricing systems in use abroad. The FEDRO drafted a summary report for submission to the Swiss Federal Council.

Our services

- Provision of support to the FEDRO project-management team in the context of drafting functional specifications documents for the above-mentioned projects
- Provision of technical support in the context of assessing the impact of mobility pricing on the region of Zug
- Provision of project support relating to technical questions and recommendations for further action
