

Evaluation of model cantonal rules governing energy use

Working on behalf of the Swiss Federal Office of Energy (SFOE), Rütter Soceco, now part of EBP, examined the effectiveness of the model cantonal rules governing energy use in buildings. In interviews and telephone surveys targeting cantonal agencies and independent experts, we evaluated how the model rules were implemented. Based on the reported enforcement challenges and data from our secondary research, we drafted recommendations for the further development and future implementation of the rules.

Our services

- Interviews with cantonal energy agencies
- Telephone survey of municipalities and experts
- Secondary research
- Evaluation of enforcement
- Submission of recommendations for further action to the Swiss Federal Office of Energy (SFOE) and the cantons
