

Assessing the sustainability of vegetable oils

Working on behalf of the Association of Swiss Rapeseed Oil Producers and the Swiss Federal Office for Agriculture (FOAG), we carried out a study to assess the sustainability of the vegetable oils used in Switzerland. The results of our study indicate that, from an ecological and social perspective, domestically produced oils, especially rapeseed oil, are far more than just a domestic alternative. Indeed, our study offers ample confirmation of the market-differentiation potential of domestic oils compared to imported oils that compete with the domestic products.

Our services

- Comparison of the ecological and social impact of domestic and imported vegetable oils based on comprehensive ecological-impact data and social lifecycle analyses
- Ascertainment of value creation and other economic effects of Swiss rapeseed oil and sunflower oil
- Compilation of lifecycle data for vegetable oil manufacturing from the start of the value chain to the distribution center

Client

Association of Swiss Rapeseed Oil Producers (VSR)

Facts

Period	2019 - 2020
