

Soundscape Design

As the pressure on our urban centers to accommodate ever more people and activities mounts, our public and semipublic spaces take on increasing importance. Soundscape design can significantly improve the experience of the people who occupy these spaces. Through planning and design measures, we create pleasant acoustic environments that provide space for both natural and artificial sounds. We thus create a diverse and pleasant soundscape.

Our services

- Consulting on the optimal design of surfaces and landscapes
- Demonstrating the effects of different building arrangements
- Consulting on sound propagation and reflection
- Consulting on the acoustic effects of façades, walls, small buildings, and other objects
