

Overall revision of Wallisellen's municipal transport structure plan

We developed a municipal overall traffic concept for the city of Wallisellen for the next 15 years. The concept outlines both main objectives and specific measures for road traffic, public transport, pedestrian and bicycle traffic, as well as parking. To ensure broad public acceptance and to obtain valuable input, we invited a group of citizens to accompany us throughout the process. Our transportation concept then formed the basis for the subsequently certified general revision of the municipal transportation development plan.

Our services

- Analysis of the current situation, including development trends
- Definition of a clear set of objectives and approaches
- Systematic development of measures to achieve the objectives
- Drafting of the municipal transportation master plan, including drawings
- Conception and conducting of two workshops to solicit the opinions of around 75 concerned citizens
- Evaluation of the public circulation, hearing and cantonal preliminary examination
