

From design sprint to platform implementation

We performed a design sprint with the members of a school development team to sharpen the goal and vision of their online platform. The platform is providing tools, supporting school administrators and authorities with their various school development topics. Together with the team we first worked out various promising solutions and then evaluated these using a prototype and prospective users. The results of our work provide a platform that promotes the team's main goals while also meeting user needs.

Our services

- Planning, execution and documentation of a design sprint workshop
- Developing a platform vision
- Drafting a journey map
- Definition of goals, target groups and requirements
- Development solutions in a collaborative design workshop
- Creation of a prototype and evaluating it with users
- Creation of a visual design
- Platform implementation with a CMS

Client

School Development Team: Zurich
University of Teacher Education,
Principality of Liechtenstein School Board
