

# Shaping the future

EBP 

At Lake Uri this 30-acre, shallow-water zone was created by depositing 3.3 million tons of material that was excavated at tunnel construction sites. Among others we were responsible for the general management of this interdisciplinary infrastructure project.

---

## A caring approach to the future.

---

As an independent enterprise, we offer a broad range of consulting, planning, construction, information technology and communication services. Based at various locations throughout the world, our 500 employees help our clients to arrive at viable and sustainable solutions they need to meet the challenges of our times. Since 1981, we have worked to secure sustainable development in the context of a larger, caring approach to the future.

A campus of a university located in São Paulo was built at the site of a former household-goods factory. As the site had been contaminated, we developed a cleanup plan to eliminate any health risks, restore the soil and groundwater, and enable the site's regeneration.

---

**Committed to a sustainable world.**

---

**Throughout the history of our enterprise, we have remained committed to the goal of preserving the earth as our only habitat and securing the well-being of future generations.**

---

## **Exploiting available opportunities**

---

**We aim to make relevant contributions to sustainable development.**

Having incorporated the concept of sustainability into our planning activities, we take a careful approach to realizing well-balanced and future-ready projects. This includes making use of natural, economic and social resources in a manner that is suited to ensuring the long-term preservation of the natural environment, as well as the capacity of future generations to meet their needs. When approaching projects, we identify the available opportunities for sustainable development and exploit these in consultation with our clients. This allows us to reduce excessive environmental impact and promote positive development.

---

## **Balancing conflicting interests**

---

In the context of realizing our projects, we aim for well-balanced forms of development that account for environmental, economic and social factors. When tensions arise between the various factors, we regard it as essential to establish priorities that protect a project's overall balance. We believe it is important to make conflicting interests transparent and to discuss them with our clients and other stakeholders. This enables us to overcome apparent conflicts and arrive at expedient, innovative and lasting solutions.

**We adhere to a notion of sustainability that encompasses environmental, economic and social dimensions.**

---

## Broad range of skills for the benefit of our clients.

---

Building upon the comprehensive skills of our employees, our interdisciplinary approach and our decades of project experience, we are able to offer our clients sound solutions in a wide range of development sectors.

**Building upon the skills and experience of employees from more than 50 disciplines, we are able to assemble the right team for every assignment that is entrusted to us. Interdisciplinary in nature, our project teams develop innovative and sustainable solutions.**

---

## Taking a holistic approach.

---

We have been committed to holistic, multidisciplinary approaches since the founding of our enterprise. It has been the key to our success in finding creative and thorough solutions to complex problems.

---

## The advantage of a comprehensive perspective

---

We direct our attention to complex services and projects that require special knowledge, many years of experience and orientation skills across the disciplines. We see the key to success in the kind of interdis-

ciplinary cooperation that gives us a comprehensive view of the assignments at hand. It is then a far shorter step to arriving at sound, novel and creative solutions.

---

## Intensive cooperation

---

Our project success derives from our commitment to interdisciplinary cooperation and robustly sustainable solutions.

Purely technical approaches seldom suffice when it comes to solving complex tasks relating to the development of our human habitat. Such approaches tend to fail to take account of the many dimensions of sustainability. This is why we consider projects from all of the relevant points of view, including the technical, economic, legal and social aspects. This enables us to provide balanced services in all project phases – from comprehensive development concepts to well-focused project implementation and smooth infrastructure operation. Intensive cooperation among employees from various disciplines leads to innovative approaches and efficient and effective solutions.

---

## Extensive knowledge and skills

---

In order to secure our capacity to provide sound solutions in a wide range of sectors, we avail ourselves of the competence of our 500 employees around the world who together represent more than 50 disci-

plines. The key is to link theoretical knowledge to practical skills. On average, our employees have more than 18 years of professional experience.

**Working on behalf of the Chilean municipality of Vitacura, we developed an energy concept involving the installation of solar panels. That is expected to enable the municipality to make use of local sources of renewable energy to cover around 30 percent of its energy needs up to the year 2030.**

### Milestones

#### EBP

1981

Founding of Ernst Basler + Partner as a separate company from the Basler & Hofmann engineering firm that was originally founded in 1963. While still at Basler & Hofmann, Ernst Basler began to promote interdisciplinary cooperation and the principle of sustainability as early as 1971.

1989

Ernst Basler formulates the enterprise's Core Values that have essentially remained valid until this very day.

1993

Founding of EBP Deutschland in Potsdam

1994

Ernst Basler passes the scepter on to his son Bruno Basler, with the family holding 100 percent of the company shares.

1996

Amendment of the EBP Core Values that are still practiced today

2010

Reformulation of the corporate strategy to emphasize the equal promotion of inner, substantive and international strength

2012

Founding of EBP Chile

2014

Acquisition of a majority stake in Geoklock (100 percent since 2016) and Bachema (60 percent) in Brazil

2015

Founding of EBP Hong Kong

2016

Affiliation with the EDR Group in Boston

2016

Changing of the company name from Ernst Basler + Partner to EBP

2016

Relocation of EBP Deutschland from Potsdam to Berlin

#### Geoklock + Bachema

1979

Ernesto Moeri founds the environmental engineering firm Geoklock in São Paulo.

2000

Founding of the environmental laboratory Bachema in partnership with Bachema AG in Switzerland

2004

The company's focus on site assessment and remediation is expanded to include other environmental activities.

2006

Expansion of the company scope to include renewable energy

2014

Acquisition of a majority stake in Geoklock (100 percent since 2016) and Bachema (60 percent) by EBP

#### EDR Group

1996

Glen and Marcia Weisbrod found the consulting firm known as EDR Group.

2005

The company's previous focus on economic analysis is expanded via the TREDIS software package.

2016

Affiliation with EBP

We are committed to lasting relationships based on openness and mutual trust. Our focus is on developing smart, needs-based and sustainable solutions for our clients.

---

## Sharing goals.

---

In addition to our commitment to interdisciplinary project approaches and the principle of sustainability, we emphasize trust, mutual esteem, teamwork, dedication and responsibility.

## Open and appreciative

---

Sound arguments are more important to us than hierarchies.

Our corporate culture is based on trust, esteem and shared values. We strive for lasting relationships with our clients, partners and employees that are based on these values. We remain committed to a culture of open discourse and mutual respect.

## Experienced and team-oriented

---

Our employees are highly qualified individuals who can think beyond the scope of their disciplines and who delight in teamwork and developing sustainable solutions in an atmosphere of open discourse. This

requires curiosity and continuous development. The exchange of knowledge that takes place between our younger and more experienced employees is also essential to our successful project work.

## Dedicated and ready to perform

---

We calibrate our services to the exact needs of our clients and we work in optimally assembled project teams. Our readiness to perform derives from our

identification with our clients and our shared commitment to sustainable development.

The upper reach of the Yangtze River is one of the most economically, ecologically and culturally important areas in China. Working together with our local colleagues and external partners, we develop climate adaptation strategies and a sustainable regional water resource management.

---

**Our success is measured by the success of our clients.**

---

**Our services are geared to the exact needs of our clients. The satisfaction of our clients is the basis of our shared success.**

## **Local commitment and global competence**

---

We aim to offer our clients innovative, customized and effective solutions to help them meet the challenges of our time. We rely on our local expertise and regional ties, as well as our extensive international experience and competence. Our enterprise has successfully completed projects in more than 70 countries throughout the world.

**We combine locally based expertise and international experience.**

## **Independent operation unified by shared values**

---

Our enterprise is present at various locations on various continents. Our employees at the various country offices enjoy extensive entrepreneurial independence as they go about meeting the specific needs of their clients.

Despite this diversity, our enterprise possesses a distinct identity. This identity is based on the shared values that connect us throughout the world.

## **Customer-oriented and quality-conscious**

---

As a customer-oriented enterprise, we measure our success by the satisfaction of our clients, the sustainability of our solutions and the quality of our services. We value flat hierarchies, our basic principles, independence and personal responsibility. This allows us to make quick decisions and to initiate

swift action. Whenever necessary, we join forces with internal or external project partners. We provide our customized services for public and private enterprises, as well as for private individuals and public agencies.

**We set ambitious goals for ourselves in the heart of Berlin when it came to designing our new office building on the Spandau Ship Canal. The result is an architecturally and technologically sophisticated building that meets the highest standards of sustainable building.**

---

## Shaping our own future.

---

We remain committed to the continuous development of our enterprise and act independently and future-oriented, also in the interest of our clients.

## Added value based on independence

---

As a family-run enterprise, we are economically, politically and professionally independent – an essential cornerstone for long-term agility and business success. This independence ensures our capacity to

respond to the exact needs of our clients and to orient our enterprise to innovation and the long-term benefit of our clients and employees.

## Investing in the future

---

In keeping with our core values, we remain committed to reinvesting in the long-term success of our enterprise and to securing the interdisciplinary expertise and vitality of our various country offices and business divisions. Founded in 2001, the BaslerFund offers testi-

mony to this commitment. The purpose of the fund is to support the sustainable development of our enterprise by securing proper resources for important research endeavors and the reinforcement of our expertise and methodological competence.

## Diligence and long-term strategy

---

Our enterprise development is based on the principle of sustainability.

We take a careful approach to shaping the development of our enterprise. All of our employees contribute to our long-term business success and to the capacity of our enterprise to adapt and evolve in response to societal and market developments. In this way we make sure that we can continue to offer our clients sound and sustainable solutions.

---

At home throughout the world.

---

Based in six locations around the world, we are there for our clients with more than 500 employees wherever they need us. More than 300 of our employees work in Switzerland and Germany and more than 200 work in Brazil, Chile, the United States and Hong Kong.

## Global competence from a single provider

---

In order to best combine local technical expertise and market knowledge with internationally leading technologies, competences and experience, we promote the development, skills and competence of our six locations around the world. This enables us to offer com-

prehensive support to our globally active clients wherever they do business. At the same time, we join forces with our clients to make a meaningful contribution to sustainable development.
